

# PROMs – Data Collection Tool

## Collect and analyze your patient reported outcome scores (PROMs) in an easy way!

You are responsible for a hospital or private clinic or you are a medical professional and have chosen to collect PROMs data. You want the best possible secure software support available which will offer you and your patient not only ease of use but also all the information required for your purpose to measure patient satisfaction and overall quality of care.

### Why this solution?

---

Personal Fit PROMs enables you to swiftly and correctly register and process patient information per clinical patient pathway and generate all kinds of reports. Personal Fit PROMs has a number of useful features:

- Interfaces with your Hospital Information System or Personal Health Record system for easy transfer of data and to avoid double entries
- Contains multiple functional outcomes and general well being scores for you to choose from and option to design or adapt questionnaires to meet your own needs (see table back page)
- High flexibility for the patient through multiple user-friendly data-entry options
- Cost efficient (one-time license fee independently of the number of patients registered and users within the hospital) and easy to install

### Benefits of Personal Fit PROMs

---

- Web based: you only need a browser!
- Maximum certified security
- Full control and overview over the process as well as complete data ownership for your hospital
- Reports are available immediately and can be adapted to your needs
- Possibility to brand the software in the look and feel of your hospital

**Personal**Fit  
Maximizing Patient Satisfaction

## Maximum ease-of-use

To make it as easy as possible for the patient to process the questionnaires and get the answers into the system, 3 types of services are offered:

- 1. Digital entry:** Data-entry can be done on a personal computer, laptop or tablet with internet connection in any location.
- 2. Paper data entry:** For patients who want to use paper forms we have standardized forms available. The data can be entered into the system manually or through OCR scans.
- 3. Interview by telephone:** He or she will be called by a trusted person to go through the questionnaire and have all the questions answered. The operator will enter all the data in the system (extra fee).

## Other Modules

- Complication Registration
- Linkage with your national registry (where applicable)
- Infection Registration
- Patient Satisfaction Registration
- Care Performance Indicators

## Overview of possible measurable Scores – Additional ones up-on request

Hip	Knee (OA)	Knee (Arthroscopy – ACL)	Shoulder
Oxford Hip Score	Oxford Knee Score	IKDC	Constant Score
